

Server Continuity Suite

Marketing Language / Communication	
Get Started: Where Are You in Your Journey?	
If you....	GET: Clarity
<i>Are unsure whether to refresh or extend:</i> Data-Driven Clarity. Stop guessing and start making CapEx decisions based on power, space, and hardware health.	ServerAudit™
	GET: Managed Services: 1) For out of warranty (critical servers) & 2) non critical servers.
<i>Need reliable support departmental systems with predictable, right-sized support</i> Managed Stability. Enterprise-grade support for a flat PKR 45K/mo--eliminating the cost of "premium" bloat.	ServerSure™
<i>Run mission-critical production systems with confidence – even when hardware is out of warranty.</i> Resilience Beyond Warranty. Maintain your production reality with confidence, even on aging hardware.	ServerLife Extend™
	GET: A Refresh
<i>Have approved a refresh but fear downtime</i> Refresh Without Rupture. We wrap your hardware in a service layer to de-risk the "Go-Live" transition.	ModServe™

CONTEXT: Server Continuity Suite: Strategic Sales Roles for all 4 services					
Client Scenario	Service	Primary Role / Sell & Success criteria	Commercial Intent	Why It Fits	Mindset Shift (The "Gap")
"Unsure whether to refresh or extend"	Server Audit™ The Hook (Top-of-Funnel)	• Function: It is a low-friction "entry point" designed to start a conversation without the pressure of a hard sale. • Success Metric: Number of "snapshots" converted into proposals.	Purpose: • To transform you from a "Vendor" into a "Trusted Advisor" by providing data before asking for a check. • Already places you in a position of trust for further consideration.	• Removes guesswork; • qualifies leads; • positions you as advisor, not vendor	From: "I'm guessing." To: "I'm making a data-backed decision."
"Need reliable support for departmental systems with predictable cost and right-sized support."	Server Sure™ The Money Maker (Core Volume)	• Providing Right-Sized Stability. • Predictable cost • It's the transition from "Emergency Repairs" to "Managed Utility." • You are selling the peace of mind that departmental engines will run without "Insurance Bloat" or bill-shocks. SUCCESS METRIC: MRR Velocity & Density: 1. Monthly Recurring Revenue (MRR) Growth: Total net-new seats per month. 2. Density: Total number of servers per client (aiming for multi-department clusters).	• Scalable MRR: Build a predictable revenue floor with high-volume, 45K/mo seats. • By pricing at PKR 45K/mo, you underprice the bloated OEM "Premium" contracts while maintaining high margins through 9-to-5 operational efficiency.	• Serves largest segment (SMEs, universities, govt depts); • The "Easy Yes" Price Point: At PKR 45K, the service falls within many "discretionary" departmental budgets, bypassing the need for complex board-level CapEx approvals. • Operational Efficiency: Because it is optimized for 9-to-5 efficiency, your team isn't "on-call" for non-critical issues at 3:00 AM, allowing you to manage more servers with fewer staff members. • Low Barrier, High Retention: The month-to-month or low-commitment structure makes it easy for a client to start. Once they experience the "Managed Stability," the cost of switching back to "Break-Fix" chaos becomes a barrier in itself.	From: "Fix it when it breaks." To: "Managed stability is a utility, like power."
"We have the budget for new Dell/Huawei hardware, but we can't afford the 'Migration Rupture' that usually comes with it."	ModServe™ The Bridge (Hardware + Readiness)	• The Bridge: Connecting the old infrastructure to the new without a "rupture" in service. • Hardware + Readiness. We don't just sell you a Dell or Huawei box; we wrap it in a service layer to ensure a "Refresh Without Rupture." SUCCESS METRIC: • Total Hardware Sales Volume • "% Conversion to ServerSure™" • How quickly a project-based "Refresh" client is onboarded into your recurring revenue ecosystem. • Migration Success Rate	• The Revenue Gateway: Strategically captures one-time CapEx refresh budgets while creating the perfect "attach point" for 3+ years of recurring revenue.	The "Bridge" Strategy: ModServe™ isn't just a delivery service; it is a Risk Mitigation Layer. You aren't selling them a box; you are selling them the guarantee that the box will actually work within their specific environment from the moment it's plugged in. The Expertise Proof-Point: Serves as a high-stakes gateway to ServerSure™; by mastering the stress of a migration, you prove the expertise required to manage the system indefinitely.	The Outcome Pivot: Beyond the Box • Value Realignment: By wrapping hardware in a high-touch service layer, you move the conversation away from "Who has the cheapest price on a server?" to "Who can guarantee our department stays online?" • Commodity to Continuity: Shifts the client's purchase from a one-time hardware transaction to a guaranteed operational result. • Anxiety Arbitrage: Captures the moment of highest client stress—the "Go-Live"—and de-risks it with local, hands-on readiness that global box-shifters cannot match. • Local Advantage: Replaces the distant, automated support of big manufacturers with immediate, on-site expertise during the most critical 24 hours of the system's life.
A premium, high-stakes service for mission-critical systems that have outlived their factory warranty.	ServerLife Extend™ The Trust Anchor (Premium Tier)	Function: To "lock in" the client by protecting their post warranty, most vital production assets & making our team indispensable to their survival. SUCCESS METRIC: Long-term contract "stickiness" and high-margin profitability.	High-margin, sticky contracts (Long-term, SLA-backed, defensible) Deeply integrates P-IT into their mission-critical operations. Hard for them to leave.	Deeply integrates you into the client's "lifeblood" systems; justifies premium pricing and builds enterprise credibility.	From: "Praying for uptime." To: "Insuring the lifeblood of the business."

ServerSure™ Service Agreement

SAMPLE

BETWEEN: Perception-IT (Pvt.) Ltd ("Provider")
AND: [Client Name] ("Client")
EFFECTIVE DATE: [●]

1. Service Description: Managed Continuity

Provider shall deliver ServerSure™, a managed utility service designed to maintain the stability of internal IT systems.
The service includes:

- Remote Monitoring: 24/7 vigilance for Windows, Linux, VMware, or Hyper-V environments.
- Strategic Patching: OS updates performed during agreed maintenance windows (9:00 AM – 5:00 PM PKT).
- Health & Stability: Proactive health checks and basic troubleshooting to maintain an Uptime Target of 99.5%.
- Exclusions: This service specifically excludes after-hours support (5 PM – 9 AM PKT), weekends, hardware replacement costs, or systems not listed in the Onboarding Inventory.

2. Client Responsibilities

To ensure continuity, the Client agrees to:

- Provide secure remote access to all covered servers.
- Maintain stable environmental conditions (power and internet).
- Designate a single point of contact for streamlined coordination.

3. Pricing & Financial Predictability

- Service Fee: PKR 45,000 per server, per month (subject to final Onboarding Inventory).
- Billing: Invoiced monthly in advance.
- Taxes: All fees exclude federal/provincial taxes; the Client is responsible for withholding if applicable.
- Late Payment: Payments overdue by 15 days may result in service suspension.

4. Term & Termination: No-Lock-In Agility

- Term: Month-to-month.
- Cancellation: Either party may terminate this agreement with 30 days' written notice.
- Early Termination: No penalties apply, ensuring the service remains a "discretionary-budget-friendly" utility.

5. Limitation of Liability & Data Security

- Liability Cap: Provider's total liability is strictly capped at one month's service fee.
- Data Responsibility: The Client remains solely responsible for data backups. Provider is not liable for data loss or failures caused by third parties or force majeure.
- SLA Credit: If the 99.5% uptime target is breached, Provider will issue a service credit (max 10% of the monthly fee).

6. Confidentiality & Governing Law

- Confidentiality: Both parties agree to protect all technical and business data as strictly confidential.
- Governing Law: This agreement is governed by the Laws of Pakistan.
- Dispute Resolution: Disputes shall be resolved amicably in Lahore, or through arbitration via the Arbitration Act 1940.

Signatures

Perception-IT (Pvt.) Ltd: _____ Title: CEO

Client: _____ Title: _____

What was added & why it matters:

- The 99.5% Uptime Target: It gives the "Continuity" promise a measurable number without creating a massive financial risk for you.
- The Liability Cap: Limiting your risk to one month's fee (45K) is standard for managed services and protects your company from catastrophic claims.
- The Data Loss Clause: Explicitly stating that the Client is responsible for backups is your most important legal shield.
- The "Lahore" Jurisdiction: Ensures that if a dispute happens, it stays on your home turf.

- Would you like me to create a "Service Onboarding Checklist" to ensure you get all the technical details needed for Section 2 and Annex A?
- would you like me to create a Service Onboarding Checklist that ensures a seamless transition for the client while protecting your operational boundaries. It is designed to be completed within your 5-day go-live window.
- Would you like me to create the template for "Annex A: Server Inventory" so you can begin documenting the hardware specs for your first client? **Why this Annex is critical for you:**
 - 1.Billing Accuracy: It provides the "Data-Driven Clarity" required to ensure you are paid exactly PKR 45K for every machine you touch.
 - 2.Scope Control: In your contract, you are only liable for systems "disclosed in the Onboarding Inventory". If a server isn't on this list, you aren't responsible for it if it breaks.
 - 3.Legal Clarity: It ties the technical reality of the server room to the legal "Limitation of Liability" in Section 5 of your agreement.
- Would you like me to draft "Annex B: Maintenance Window Schedule" to define exactly when you will perform patching without disrupting the client's output?

INTERNAL DOCUMENT: Table of content: ServerSure™ Profitability Sheet Per Client Per Engineer Monthly					
Tier	Price/Server	Avg. Servers/Client	Revenue/Client	Effort/Client	Revenue per Hour of Effort
Starter	PKR 45,000	4	PKR 180,000	2.5 hrs	PKR 72,000/hr
Standard	PKR 42,000	10	PKR 420,000	6.0 hrs	PKR 70,000/hr
Enterprise	PKR 40,000	20	PKR 800,000	16.0 hrs	PKR 50,000/hr
Enterprise generates 30% less revenue per hour of engineer effort than Starter.					
Is This Justified? Only If... You get strategic value beyond ServerSure™, such as: - Cross-sell to ServerLife Extend™ (PKR 60K–80K/server) - Win ModServe™ hardware deals (20–30% gross margin on CapEx) - Secure PSDP or govt references (long-term trust) If not, then Enterprise pricing is eroding your profitability.					
The Hidden Risk - Engineers prefer Starter clients (easier, higher revenue/hr) - Sales team may oversell Enterprise (big contract = big commission) - You end up subsidizing strategic bets with operational profit					
Recommended Fixes Option 1: Keep PKR 40K — but enforce conversion: - Enterprise clients must sign 6-month ServerSure™ + Audit - Mandate ServerLife Extend™ assessment within 90 days - Track LTV, not just ServerSure™ margin Option 2: Raise Enterprise floor price: - Minimum PKR 45K/server for first 10 servers - Discount only applies beyond 15 servers - Example: - First 10 servers: PKR 45K - Next 10: PKR 35K → Avg = PKR 40K, but protects base margin Option 3: Bundle, don't discount: "Enterprise Package": PKR 800,000 flat/month (for up to 20 servers) - No per-server math → preserves perceived value - Easier to justify quarterly reviews and SLA rigor					
<u>Final Verdict</u> Your PKR 40K Enterprise rate is defensible ONLY if: - It's a gateway to higher-value services, AND - You track full client LTV, not just ServerSure™ profit If Enterprise clients stay in ServerSure™ long-term, you are leaving PKR 10M+/year on the table per engineer. <u>Ask yourself:</u> “Would I rather have 3 Enterprise clients at PKR 40K... or 15 Starter clients at PKR 45K?” Revenue: PKR 2.4M vs. PKR 6.75M Net Profit: PKR 1.93M vs. PKR 5.64M The math is clear.					
Action Step - Add a “Strategic Value” column to your Enterprise profitability sheet - Require sales to document cross-sell potential before quoting PKR 40K - Review Enterprise clients quarterly: Convert or reprice This isn't about raising prices — it's about ensuring every discount earns its keep.					
Let me know if you'd like a revised Enterprise profitability sheet with LTV modeling.					

Operational scalability should be built per tier — not for ServerSure™ as a monolithic service.

Should ServerSure™ have tiers?

Yes — internally, to match client scale and complexity.
No — publicly, as a self-serve menu. *ServerSure™ should be presented as a single, intelligently scoped offering — with pricing that adapts privately based on assessment.*

Why Public Tiers Hurt You:

- Commoditize your service → turns “trusted continuity” into “package A vs. B”
- Invites price shopping → clients optimize for cost, not fit
- Creates false expectations → “Why can’t I get Tier 3 features at Tier 1 price?”
- Undermines advisory positioning → you’re a strategic partner, not a SaaS vendor
- Your differentiator is right-sizing — not packaging.

1. ServerSure™ – Tiers Have Fundamentally Different Operating Models

Dimension	Starter	Standard	Enterprise
Skill Required	Junior Engineer (PKR 90K)	Mid-Level (PKR 130K)	Senior + Coordinator (PKR 200K+)
Process Complexity	Scripted, batchable	Custom windows, reporting	SLA tracking, multi-site coordination
Tooling Needs	Basic RMM	RMM + backup verification	RMM + dashboards + audit trails
Quality Control	Spot-check	Monthly review	Weekly SLA reports
Client Interaction	Email/ticket	Scheduled calls	Dedicated relationship
→ You cannot scale these with one playbook. A process that works for 25 Starter clients will fail on 3 Enterprise clients — and vice versa.			

2. ServerSure™ – Hiring & Training Must Be Tier-Specific

1	Starter	Hire juniors → train on standardized runbooks	
2	Standard	Hire mids → train on mixed-OS + reporting	
3	Enterprise	Assign seniors → train on client communication + SLA rigor	
	If you build scalability at the service level, you’ll:	• Over-engineer Starter (wasting margin) • Under-resource Enterprise (risking reputation)	

3. ServerSure™ – Quality & Risk Are Tier-Dependent

A Starter client outage = payroll delay (frustrating but recoverable) An Enterprise client outage = PSDP audit exposure (reputational risk) → Your operational controls must scale with consequence, not just volume.

4. ServerSure™ – Financial Sustainability Demands Tiered Ops

Starter funds growth via volume → needs automation & efficiency Enterprise funds trust via quality → needs human oversight & documentation Blending them forces compromise: • Either you over-service Starter (eroding 83% net margin) • Or under-service Enterprise (triggering churn)

ServerSure™ – Recommended Approach: Tiered Scalability Framework

Layer	Starter	Standard	Enterprise
People	Junior Engineers	Mid-Level Engineers	Senior Engineers + Ops Coordinators
Process	Fully scripted (patching, health checks)	Semi-custom (windows, reports)	Client-specific SLA workflows
Technology	Basic RMM + auto-patching	RMM + backup validation	RMM + custom dashboards + alerting
Quality	Random audit (10%)	Monthly report review	Weekly SLA compliance check
Scalability Lever	Automation & batching	Template standardization	Playbook + dedicated resourcing
When to Integrate Across Tiers Only at the platform layer: • Shared monitoring infrastructure (e.g., one Grafana instance) • Unified ticketing system (e.g., Jira Service Management) • Common security/compliance baseline (e.g., patch policy) But execution must remain tier-segregated.			
Final Verdict Build operational scalability per tier. It’s the only way to maintain margin integrity, quality control, and strategic alignment across your client base. This is how sovereign, pragmatic IT services scale in Pakistan — right-sized, not one-size-fits-all.			
Let me know if you'd like a tiered ops playbook template or hiring roadmap per tier .			

Table of content: ServerSure™ Profitability Sheet <i>Per Client Per Engineer Monthly</i>		
<i>Starter Tier Profitability Sheet</i>	<i>– Starter Tier Profitability Sheet</i>	<i>– Starter Tier Profitability Sheet</i>

ServerSure™ – Starter Tier Profitability Sheet <i>Per Client Per Engineer Monthly</i>		
1. Service Definition		
1	Parameter	Value
2	Client Profile	≤5 servers, single OS (e.g., Windows-only), basic monitoring, no custom patch windows
3	Avg. Servers per Client	4 (midpoint of 3–5)
4	Key Activities	• Health checks • Patching • Basic ticket resolution (1–2/month) • Minimal reporting
5	Effort per Client	2.5 hours/month
6	Breakdown of Effort	• Patching: 1.5 hrs • Ticket resolution: 0.5 hrs • Monitoring review: 0.5 hrs
7	Max Clients per Engineer	25 clients

ServerSure™ – Starter Tier Profitability Sheet			
Per Client Per Engineer Monthly			
2. Financials (Per Client / Monthly)			
	Metric	Calculation	Amount (PKR)
	Revenue	4 servers × PKR 45,000	180,000
	Labor Cost	2.5 hrs × PKR 1,104/hr	2,760
	Gross Profit	180,000 – 2,760	177,240
	Engineer Loaded Cost Rate: PKR 1,104/hour (Based on PKR 154,500/month ÷ 140 billable hours)		
3. Financials (Per Engineer / Monthly)			
	Metric	Calculation	Amount (PKR)
	Total Revenue	25 clients × 180,000	4,500,000
	Total Labor Cost	Fixed (1 engineer)	154,500
	Gross Profit	4,500,000 – 154,500	4,345,500
	Operating Expenses	13% of revenue (Sales + G&A)	585,000
	Net Profit	4,345,500 – 585,000	3,760,500
	Net Margin	(3,760,500 ÷ 4,500,000) × 100	83.6%
4. Annualized View (Per Engineer)			
	Metric	Amount (PKR)	
	Annual Revenue	54,000,000	
	Annual Net Profit	45,126,000	
	Metric	Amount (PKR)	
	Annual Revenue	54,000,000	
	Annual Net Profit	45,126,000	
5. Strategic Notes			
- Highly scalable: One engineer supports 25 clients with minimal supervision - Low risk: Uniform environment reduces errors and escalations - Strong cash flow: Monthly billing, high retention (>90%) - Guardrail: Do not discount below PKR 40,000/server — net margin drops below 80%			
Assumptions (Auditable)			
- Pricing: PKR 45,000/server/month (your stated rate) - Engineer Cost: PKR 130,000 salary + 10% benefits + PKR 5,000 tools + 15% overhead = PKR 154,500/month - Billable Hours: 140/month (40 hrs/week × 3.5 weeks) - OpEx: 13% (conservative vs. industry 15–20%)			
END			
Starter Tier Profitability Sheet			

ServerSure™ – Standard Tier Profitability Sheet			
Per Client Per Engineer Monthly			
1. Service Definition			
1	Parameter	Value	
2	Client Profile	6–15 servers, mixed OS (Windows + Linux), custom patch windows	
3	Avg. Servers per Client	10 (midpoint of 6–15)	
4	Key Activities	• OS-specific patching • Backup verification • Custom maintenance windows • Monthly uptime report • Moderate ticket load (2–4/month)	
5	Effort per Client	6.0 hours/month	
6	Breakdown of Effort	• Patching (mixed OS): 3.0 hrs • Backup verification: 1.0 hr • Ticket resolution: 1.5 hrs • Monthly reporting: 0.5 hr	
7	Max Clients per Engineer	8 clients	
8	Total Servers Supported	80 servers (8 × 10)	
ServerSure™ – Standard Tier Profitability Sheet			
Per Client Per Engineer Monthly			
2. Financials (Per Client / Monthly)			
	Metric	Calculation	Amount (PKR)
	Revenue	10 servers × PKR 42,000	420,000
	Labor Cost	6.0 hrs × PKR 1,104/hr	6,624
	Gross Profit	420,000 – 6,624	413,376
	Gross Margin	(413,376 ÷ 420,000) × 100	98.4%
	Engineer Loaded Cost Rate: PKR 1,104/hour (PKR 154,500/month ÷ 140 billable hours)		
3. Financials (Per Engineer / Monthly)			
	Metric	Calculation	Amount (PKR)
	Total Revenue	8 clients × 420,000	3,360,000
	Total Labor Cost	Fixed (1 engineer)	154,500
	Gross Profit	3,360,000 – 154,500	3,205,500
	Operating Expenses	13% of revenue (Sales + G&A)	436,800
	Net Profit	3,205,500 – 436,800	2,768,700
	Net Margin	(2,768,700 ÷ 3,360,000) × 100	82.4%
4. Annualized View (Per Engineer)			
	Metric	Amount (PKR)	
	Annual Revenue	40,320,000	
	Annual Net Profit	33,224,400	
5. Strategic Notes			
		High retention: Reporting and backup verification increase stickiness Gateway to Enterprise: Universities and mid-sized firms often expand Efficient at scale: 8 clients = full utilization without burnout Guardrail: Requires mid-level engineers (not juniors) — protect pricing to maintain margin	
Assumptions (Auditable)			
		• Pricing: PKR 42,000/server/month (your stated rate) • Engineer Cost: PKR 130,000 salary + 10% benefits + PKR 5,000 tools + 15% overhead = PKR 154,500/month • Billable Hours: 140/month • OpEx: 13% (Sales 8% + G&A 5%)	
		END Standard Tier Profitability Sheet	

ServerSure™ – Enterprise Tier Profitability Sheet

Per Client | Per Engineer | Monthly

1. Service Definition		
1	Parameter	Value
2	Client Profile	16+ servers, multi-site or multi-department, SLA-backed (e.g., 99.5% uptime)
3	Avg. Servers per Client	20 (conservative midpoint of 16–25+)
4	Key Activities	• Coordinated patching across sites • SLA compliance tracking • Escalation handling • Dedicated communication • Quarterly business reviews • Proactive health audits
5	Effort per Client	16.0 hours/month
6	Breakdown of Effort	• Patching & coordination: 6.0 hrs • SLA monitoring/reporting: 4.0 hrs • Ticket/escalation handling: 4.0 hrs • Quarterly prep (monthly avg.): 2.0 hrs
7	Max Clients per Engineer	3 clients
8	Total Servers Supported	60 servers (3 × 20)
Note: Due to high accountability and context complexity, 3 clients = practical limit (48 billable hrs + 32 hrs comms = 80+ hrs total)		

ServerSure™ – Enterprise Tier Profitability Sheet

Per Client | Per Engineer | Monthly

2. Financials (Per Client / Monthly)			
	Metric	Calculation	Amount (PKR)
	Revenue	20 servers × PKR 40,000	800,000
	Labor Cost	16.0 hrs × PKR 1,104/hr	17,664
	Gross Profit	800,000 – 17,664	782,336
	Gross Margin	(782,336 ÷ 800,000) × 100	97.8%
	Engineer Loaded Cost Rate: PKR 1,104/hour (Based on PKR 154,500/month ÷ 140 billable hours)		
3. Financials (Per Engineer / Monthly)			
1	Metric	Calculation	Amount (PKR)
2	Total Revenue	3 clients × 800,000	2,400,000
3	Total Labor Cost	Fixed (1 engineer)	154,500
4	Gross Profit	2,400,000 – 154,500	2,245,500
5	Operating Expenses	13% of revenue (Sales + G&A)	312,000
6	Net Profit	2,245,500 – 312,000	1,933,500
7	Net Margin	(1,933,500 ÷ 2,400,000) × 100	80.6%
4. Annualized View (Per Engineer)			
	Metric	Amount (PKR)	
1	Annual Revenue	28,800,000	
2	Annual Net Profit	23,202,000	

5. Strategic Notes	
- High strategic value: Enterprise clients often lead to ServerLife Extend™ or ModServe™ engagements - Referenceable: Ideal for case studies (e.g., govt departments, conglomerates) - Lower absolute profit: Due to lower client count per engineer - Requires senior talent: Not suitable for junior/mid engineers — impacts hiring cost if scaled carelessly - Key guardrail: Only accept Enterprise clients with clear path to larger infrastructure partnerships	
Assumptions (Auditable)	
- Pricing: PKR 42,000/server/month (your stated rate) - Engineer Cost: PKR 130,000 salary + 10% benefits + PKR 5,000 tools + 15% overhead = PKR 154,500/month - Billable Hours: 140/month - OpEx: 13% (Sales 8% + G&A 5%)	

END

Enterprise Tier Profitability Sheet

Final Insight

While Enterprise tier has the lowest net profit per engineer (PKR 1.93M/month) compared to Starter (PKR 3.76M) or Standard (PKR 2.77M), it delivers disproportionate strategic value:

- Builds trust for mission-critical services
- Enables cross-sell into higher-margin offerings
- Strengthens brand in public-sector and enterprise markets

Use Enterprise selectively — not for volume, but for leverage.

Critical Hiring Triggers – ServerSure™
Based on Verified Capacity & Profitability Models

Tier	Trigger	Action	Role & Cost (PKR/month)	Rationale
Starter (≤5 servers, single OS)	20+ active clients	Hire 1 Junior Engineer	80,000 – 100,000	One engineer maxes at 25 clients (~62.5 hrs). At 20 clients, utilization hits 80% – hire ahead of bottleneck.
Standard (6–15 servers, mixed OS)	6+ active clients	Hire 1 Mid-Level Engineer	120,000 – 140,000	Max capacity = 8 clients. At 6 clients, effort = 36 hrs + comms → 80% load. Prevents quality drop in patching/reporting.
Enterprise (16+ servers, SLA-backed)	1 active client	Assign to Senior Engineer (reallocate from pool)	—	Enterprise requires senior oversight from Day 1. Do not assign to mid/junior.
	2+ active clients	Hire 1 Ops Coordinator	60,000 – 70,000	Frees senior engineers from reporting, scheduling, and comms. Protects technical capacity.
	4+ active clients	Hire 1 additional Senior Engineer	160,000 – 180,000	Max sustainable load = 3 clients/engineer. At 4, risk of SLA breach rises sharply.

Price strategy & Operational Scalability

How to Present It on the Website

Option 1: Single Offer + Custom Quote CTA

“PKR 45,000/server/month (typical for most teams).

Larger estates? Get a tailored quote.”

[Get My Free Snapshot] [Request Custom Quote]

Best for: SMEs, departments, universities

Option 2: “Starting At” Language

“Predictable support from PKR 45,000/server/month.”

(Fine print: “Volume discounts available for 6+ servers.”)

Best for: Lead gen with scalability

Option 3: No Price on Page — Gate Behind Snapshot

Remove public pricing.

After Free Snapshot, deliver personalized quote.

Best for: High-touch sales, avoids price anchoring

Strategic Recommendation

Use Option 1 on your public page:

“PKR 45,000/server/month (typical for most teams).

Need coverage for 6+ servers? We’ll optimize your plan.”

Then:

- Free Snapshot qualifies server count/complexity
- Your team applies internal tiering silently
- Client feels customized care, not package selection

What to Avoid

- “Bronze/Silver/Gold” tiers
- Feature comparison tables
- Self-serve pricing calculator

These belong to cloud marketplaces — not sovereign infrastructure partners.

Operational scalability			
Critical Hiring Triggers 20+ Starter clients → Hire Junior Engineer (PKR 80K–100K) 6+ Standard clients → Hire Mid-Level Engineer (PKR 120K–140K) 1+ Enterprise client → Assign Senior; at 2+, add Ops Coordinator (PKR 60K–70K)			Create an interactive Google Sheet with auto-calculations.
Core Assumptions (Based on Your Delivery Model)			
	Activity	Time per Server/Month	Notes
1	Health check + monitoring review	15 mins	Automated alerts reduce manual checks
2	Patching (Windows/Linux)	30–45 mins	Includes validation, rollback prep
3	Ticket resolution (avg. 1–2/month/client)	60–90 mins	For Starter; more for Standard/Enterprise
4	?	?	?
Critical: Support is not per server — it’s per client environment. One client with 10 servers takes less effort than 10 clients with 1 server each (due to context switching).			

Engineer Capacity Model – ServerSure™								
Capacity by Tier (Expanded Version)								
Ask AI to create a dashboard template that tracks profitability all three tiers in real time: How It Stays Real-Time - Every time you add a client in “Live Data”, the dashboard auto-updates - Share with your CFO, ops lead, and sales head (View or Edit access) - Update weekly during team syncs								
Tier	Client Profile	Avg. Servers per Client	Key Activities	Effort per Client (Hours/ Month)	Breakdown of Effort	Max Clients per Engineer*	Total Servers Supported (Range)	Rationale & Constraints
Starter	≤5 servers, single OS (e.g., Windows-only), basic monitoring, no custom patch windows	3–5	- Health checks - Patching - Basic ticket resolution (1–2/month) - Minimal reporting	2.5 hours	- Patching: 1.5 hrs - Ticket resolution: 0.5 hrs - Monitoring review: 0.5 hrs	20–25 clients	60–125 Servers	- Low complexity; tasks are batchable across clients. - High client count feasible due to uniformity. Context-switching cost exists but manageable.
Standard	6–15 servers, mixed OS (Windows + Linux), custom patch windows, backup verification, monthly reporting	8–12	- OS-specific patching - Backup validation - Custom maintenance windows - Monthly uptime report - Moderate ticket load (2–4/month)	6 hours	- Patching (mixed OS): 3 hrs - Backup verification: 1 hr - Ticket resolution: 1.5 hrs - Reporting: 0.5 hrs	7–8 clients	56–96 servers	Mixed environments require more testing and validation. Custom windows reduce batching efficiency. Reporting adds administrative overhead.
Enterprise	16+ servers, multi-site or multi-department, SLA-backed (e.g., 99.5% uptime guarantee), quarterly reviews, dedicated communication	20–25	- Coordinated patching across sites - SLA compliance tracking - Escalation handling - Quarterly business reviews - Proactive health audits	16 hours	- Patching & coordination: 6 hrs - SLA monitoring/rep orting: 4 hrs - Ticket/escalat ion handling: 4 hrs - Quarterly prep: 2 hrs	3 clients	60–75 servers	High accountability demands documentation, planning, and responsiveness. Multi-site = more variables. SLA = zero tolerance for error → higher cognitive load.

Engineer Capacity Model – ServerSure™				
Capacity by Tier (Summary Version)				
Ask AI to create a dashboard template that tracks profitability all three tiers in real time: How It Stays Real-Time - Every time you add a client in “Live Data”, the dashboard auto-updates - Share with your CFO, ops lead, and sales head (View or Edit access) - Update weekly during team syncs				
Tier	Effort per Client	Max Clients per Engineer	Total Servers Supported	Key Constraints
Starter (≤5 servers, single OS)	2.5 hrs/month	20–25	60–125	Batchable tasks; low complexity
Standard (6–15 servers, mixed OS)	6 hrs/month	7–8	56–96	Custom windows; reporting overhead
Enterprise (16+ servers, multi-site, SLA)	16 hrs/month	3	60–75	High accountability; zero-error tolerance
